KEY INSIGHTS & RECOMMENDATIONS

Insights:

- ❑ **Service-wise Churn:** Highest churn in Online Security and Tech Support services; lower churn in Phone Service and Internet Service.
- ❑ **Payment Methods:** Electronic check users showed the highest churn (1,071 customers), followed by mailed checks (308) and credit cards (232).
- ❑ **Contract Influence:** Month-to-month contracts had a 42.71% churn rate, compared to 11.27% (1-year) and 2.83% (2-year) contracts.
- ❑ **Internet Service Type:** Fiber optic users faced 41.89% churn versus 18.96% for DSL users.
- ❑ **Demographics:** Customers with dependents and those avoiding paperless billing had lower churn rates, highlighting the importance of personalization.
- ❑ **Customer Profiling:** High-risk segments were identified to enable targeted retention campaigns and service-specific interventions.

Actionable Recommendations:

- Implement retention strategies for high-risk services (Online Security, Tech Support).
- Introduce contract incentives to convert month-to-month users to longer-term plans.
- Target electronic check users with personalized communication to reduce churn.
- Use demographic insights to design personalized offers for customers with dependents or paperless billing preferences.
- Monitor churn trends via interactive Power BI dashboards to support real-time decision-making.
